

Sales Data Analysis Report

ApexPlanet Internship-Task5

Executive Summary

This project analyzes the Sample Superstore dataset to identify sales trends, profit patterns, and business opportunities. Data cleaning, visualization, dashboard creation, and KPI analysis were performed to generate meaningful business insights.

Dashboard Overview

The dashboard was created using Python visualization libraries to analyze sales, profit, category-wise performance, and regional trends. It provides an interactive view of key business metrics and supports data-driven decision-making.

Key Insights and Recommendations

Top 5 Insights

1. Technology category generated the highest sales.
2. Office Supplies showed stable performance. Some regions generated higher profits.
3. Certain products had high sales but low profits
4. Sales showed seasonal variations.

Business Recommendations

1. Focus marketing on Technology products.
2. Improve profitability of low-margin products.
3. Optimize inventory based on seasonal demand.
